

AMENDMENTS TO THE SPECIFICATION

The International application was filed and published in the Japanese language. A translation of the International application is submitted herewith and is amended herein. In the attached substitute specification, paragraph numbering has been added and minor wording changes have been made to the literal translation of the International application, which serves as the basis from which all amendments are made. Additionally, reference to “Patent Document 2” in paragraph [0015] has been amended to refer more explicitly to the second patent previously referred to in the specification paragraph [0006] “Japanese Patent No. 2680462” to conform with U.S. practice. Similarly, paragraphs [0016, 0143, 0162 and 0163] have been amended to refer to “Japanese Patent Laid –Open No. Heisei 8-501321 rather than “Patent Document 3.” In paragraph [0016], reference to this document was incorrectly translated as “National Publication of International Patent Application No. 8-5011321.” The amendment of this paragraph corrects an obvious error in reference to the document since it is readily apparent that 8-501132 is not the proper format for an International Parent Application. Additionally, the number originally recited, 8-5011321, contains a clerical or typographical error. No patent corresponding to this number is known to exist. The number has been amended to read 8-501321. No new matter has been added to the specification.

The translation of the abstract is the final page of the substitute specification.
